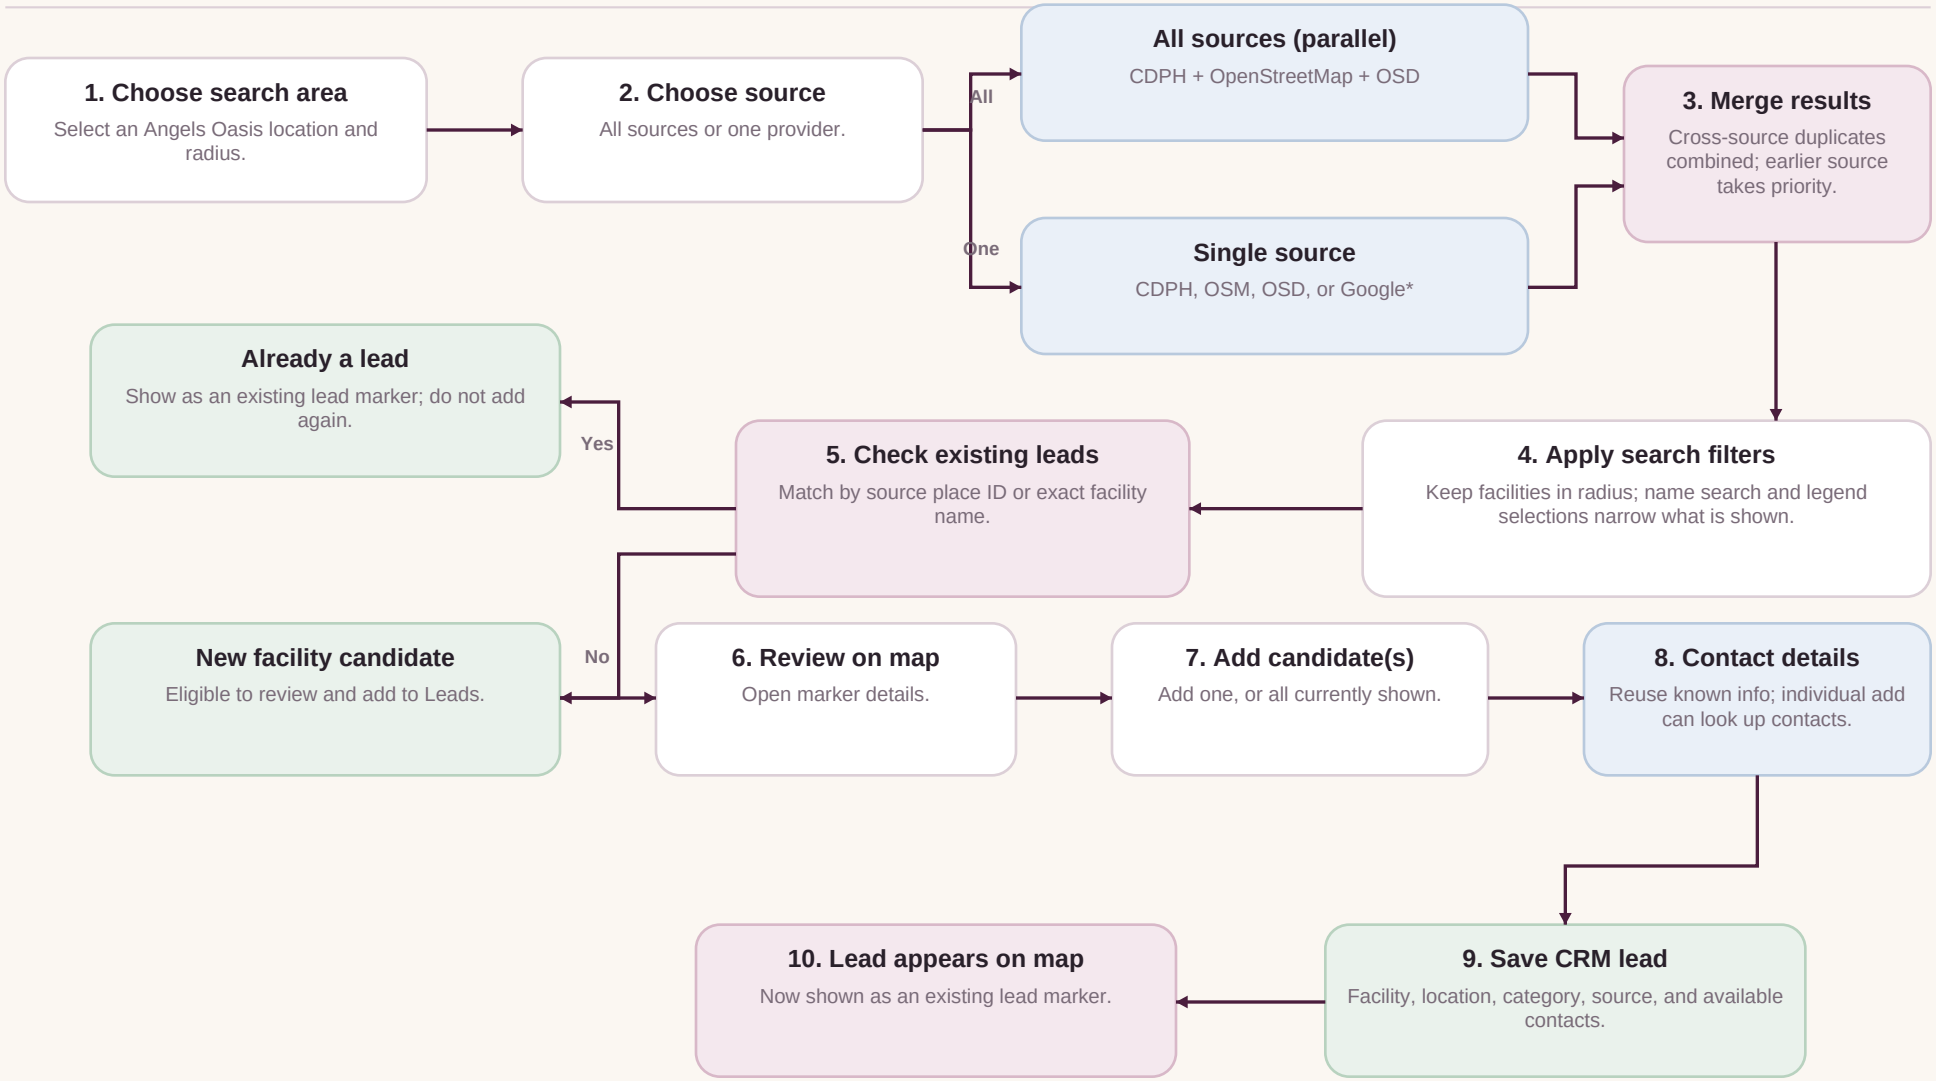
Hospitals Map | Lead-Discovery Flow

From nearby facility search to a saved CRM lead



NOTES

- CDPH-only search falls back to OpenStreetMap if CDPH is unavailable. In All sources mode, any successful sources can still contribute results.
- Level of care, health system, contact info, and name filters control the visible candidates. ?Add All Leads? adds only new candidates currently shown.
- * Google Places appears only when configured. Contact scanning is optional; lacking contact info does not prevent a facility from being added.
